

International Supply Chain Management, MSc

One-year full-time master in English, starts in September and February

Do you want to take your knowledge of Supply Chain Management to the next level?
Are you looking to enhance your managerial and leadership skills?

A Supply Chain Manager is not a master of just one specific area in the supply chain; they are a master of all areas including sourcing, planning, transportation, distribution, warehousing, inventory management, customer service and strategic leadership. Our one-year intensive programme is designed to provide you with the knowledge and skills required to transform yourself into a well-rounded Supply Chain Manager. You will participate in an intensive programme of combined classroom learning, company projects and self-led projects. In this environment, you will both broaden and deepen your theoretical knowledge about Supply Chain Management while simultaneously developing your project management skills and cultivating your personal leadership capabilities. At the end of the programme, you will be an expert in the functional areas of Supply Chain Management and will be equipped with the skills necessary to manage the supply chain of an organisation.

The Competencies

The competencies that you will gain during the master programme will teach you how to properly address the demands of the business community and prepare you to navigate within a rapidly changing global business environment.

The competencies that you will obtain:

- **Competency 1: Holistic Approach**

A Master in International Supply Chain Management takes a holistic approach of the International supply chain, recognising the interdependencies of the various activities involved both internally and externally.

- **Competency 2: Operationalisation of strategic vision**

A Master in International Supply Chain Management translates and aligns the company's strategic vision and operationalises and communicates this strategic vision with regards to logistics & supply chain issues such as: customer service, sourcing, production, planning, transportation, distribution, technology, ethics, environmental responsibility and sustainability.

- **Competency 3: Maximisation of value**

A Master in International Supply Chain Management analyses opportunities and related costs, performance and risks to make well founded decisions with regards to leading and managing logistics and the supply chain. Capitalises on changes and trends in both the internal and external environment, as well as develop relationships and networks.

- **Competency 4: End to end optimisation**

A Master in International Supply Chain Management organises, governs and improves logistics systems using balanced performance measurement based decision-making to support organisational goals. Manages processes and responsibilities within an organisation. Identifies and influences key stakeholders inside and outside of the organisation to drive supply chain initiatives through to completion.
